

UI 2/3 Dev. Onsite:

The interview's very practical. It mainly tests candidate's vanilla JS knowledge.

The coding round asked us to come build a payment gateway page where user enter credit card information. Validate the same, save the card and show the saved cards. All using only vanilla JS only, no frameworks or library.

Another question - Write an algo for split-wise app.

Other things to learn - Problem solving skills, and learn the tree data structure and how to deal with problems using the same.
